MYCOLOGICAL REMAINS IN PALYNOLOGICAL DIAGRAMS

Daria Bertolani Marchetti and C.A. Accorsi

Botanical Institute of the University of Bologna

In palynological researches fungal remains may be important for paleoecological and sometimes for paleoclimatical interpretations. Some palynologist, therefore, pays atention to these records and their connections with the tracheophytic vegetation. In this paper we present a sintetical review of informations we can have from several fungal remains.
